

Moving water forward

Services:

- Water transfer services
- WaterForce: Automation & control systems
- Temporary pipelines
- Water hauling & transportation
- Construction services
- Roustabout services
- Wastewater recycling
- Pipeline inspection
- Equipment

We support natural gas customers with automated water transfer, pumping, treatment, and storage solutions. Our proprietary **WaterForce®** automated control system utilizes industry proven, rugged industrial controls to efficiently manage complex water transfer operations. Our experienced team will design, install, and operate a customized water management solution for any kind of water or wastewater management project, including extreme terrain and high-pressure systems. As always, we are committed to the safety of our employees and to environmental responsibility and sustainability.

Water Transfer and Automation

The leading edge of efficiency and performance

WaterForce® is our proprietary and industry-leading automation and control system for use in water transfer, wastewater management, and water system operations and maintenance. WaterForce is capable of operating customized, mobile, and heavy-duty water transfer systems that are designed to operate in remote conditions and extreme terrain scenarios. Our staff engineers and automation technicians customize unique SCADA control scenarios for each water transfer system in support of clean natural gas development.

Key features of WaterForce technology

We designed WaterForce to allow for total water management and control from a command trailer, featuring connectivity to customized automated equipment, including “smart” manifolds, automated valves, remote pump control, and a variety of control and remote instrumentation, unique to each operation.

Communication

- Cellular, mesh radio, fiber optics, & satellite
- Best-in-class hardware for mission-critical operations

Programmable logic

- Safety interlocks at every level
- Localized control logic prevents spills, over-pressured lines, and over-heated pumps

Transparency

- Integrated customer transparency
- View real-time and historical data on flow rates, tank levels, pressures, pump status, and more
